Automotive Specialists, Inc. has developed this Chevrolet sealed engine utilizing our 46 years of building racing engines. Our current experience working on Nationwide, Truck and other current upper level racing engines, also play an important part in this package.

This engine can be used for different divisions requiring horsepower restrictions by using different carburetors.

Durability and longevity were prime factors in designing this engine.

8 mm coated valves, beryllium copper alloy valve seats along with a hydraulic roller cam and light weight rockers provide a broad operating rpm and durability.

Quality parts are used throughout the engine and external accessories.

Sealed Engine
